

LCO CROSSFIRE

One N' Done Packing Cartridge

With ever changing chemical blends and compatibility uncertainty, LCO Technologies has developed a proprietary seal compatible with 5100 style fluid ends which provides superior chemical compatibility and resiliency in a broad range of applications.

The One N' Done packing was designed from the ground up to address many of the problems that plague chemical injection. This multi-purpose, single piece seal removes the need to monitor jam nut compression and works in both high- and low-pressure applications. The state-of-the-art packing is designed to reduce friction and wear, increase electrical efficiency, and is impervious to dusty environments. The One N' Done accomplishes all of these benefits and much more while outperforming traditional v-packings in even the harshest chemicals. The goal is to reduce the frequency of adjustment, service, and replacement of your packings.

ONE N' DONE FEATURES

One Piece Design

Performance in High
& Low Pressure
Applications

Reduced Need for
Soft Goods Material
Variety

Increased Electrical
Efficiency

No Need for Packing
